# AMB Dataminers news release

## SOFTWARE, DATABASE & PROFESSIONAL SERVICE PROVIDERS OFFERED UNLIMITED USE LICENSE FOR AUTOMATED DATA PROFILING

**Chicago, IL, January 13, 2003** “AMB”, a software factory providing data profiling, metadata and migration solutions through its *eCartography Suite* of products, is now offering affordable unlimited use licenses, software branding and joint development options.

As data profiling and migration solution needs increase, Software, Database and Professional Service providers are looking to offer this technology to their customers.

**Developing, renting or purchasing these solutions, however, have been cost prohibitive.**

AMB’s unlimited use licenses will pay for itself in a handful of projects, leaving the rest of the profits, control and deliverables in the hands of our partners.

AMB’s goal is to meet marketplace needs by designing and developing products to provide *eCartography* licenses to multiple companies, or the full intellectual property to one company. The *eCartography Suite* consists of four separate components to survey metadata, provide data profile analysis and migrate data from disparate systems and its Flat File Migrator.

Through the *eCartography* usage license plans, AMB will help companies deliver these competitive solutions at a fraction of the cost and time of development or acquisition of other vendors. Additional products will be provided yearly based on corporate and market requirements.

AMB Dataminers Inc., owner of the *eCartography Suite*, is a privately held corporation located in Chicago, Illinois.
